# 🍛 Curry & Co.

**The end-to-end platform powering Bengali & Indian cloud-kitchen deliveries across the Greater Toronto Area.**

*One brand. Three purpose-built apps. Zero moving parts to manage.*

## 🛒 1. Customer App iOS · Android · Web

*Positioning: A native mobile experience that turns a chaotic weekly meal decision into a two-tap ritual.*

### Headline Features

- **Dynamic Weekly Menus** — refreshed every Sunday. Order Sun–Thu, delivered Fri–Sat. Creates urgency + predictable kitchen ops.
- **Two Menu Modes, One Tap Away**
  - 🍽️ **À la carte** — pick any dish, any quantity
  - 📦 **Weekly Package Combo** — "Pick 4 items for $59" flat-price bundles with live savings indicator
- **Catering Packages v2** — per-person pricing, customizable guest count (min 10), mandatory + optional add-ons, tiered upgrades, automatic upcharges.
- **Unified "Bag" Tab** — active cart *and* past orders in one place. Reorder in one tap.
- **Guest Checkout + Google Sign-In** — no friction, no forced accounts.
- **Live Order Tracking** — real-time driver location, live ETA, status timeline.
- **Flexible Payments** — Stripe (card) + Cash on Delivery. Failed Stripe payments auto-drop (no ghost orders).
- **Coupons & Loyalty** — promo codes at checkout, savings line, admin-toggled tax.
- **Bengali-first branding** with a warm, appetite-triggering visual palette.

> *"Fast, gestural, native-feeling. No web forms, no dead-ends. Feels like their favourite ride-share app — but for home-style dinners."*

## 🚗 2. Delivery Partner App iOS · Android

*Positioning: Fleet-ready routing that turns any partner phone into a professional last-mile terminal.*

### Headline Features

- **Interactive Zoomable Google Map** — pinch, pan, tap. Numbered A/B/C… stops + start marker + live polyline route.
- **Google-Optimized Multi-Stop Routing** — one tap → shortest total-time sequence via Google Directions.
- **Address-Based Start Point** — type any address and geocoding turns it into coordinates. Or one-tap "Use my location".
- **Manual Reorder** — chevron ⬆⬇ on any stop; ETA + polyline + map auto-recalculates in seconds.
- **Tap-to-Navigate** — every stop tile deep-links to Google Maps turn-by-turn directions from origin.
- **Customer Context on Each Stop** — name, address, order total, ID, distance, ETA — all glanceable.
- **START DELIVERY Button** — one tap: flips all orders to "on the way", broadcasts driver location every 10s, powers the customer's Live Tracking with real ETA.

- **Journey Persistence** — driver logs out mid-shift? Logs back in → exact route + progress restored.
- **Auto-End on Completion** — journey closes automatically once every stop is marked delivered.
- **Location Heartbeat** — 30s idle / 10s active, keeps ops + customers in sync.

> *“Zero paperwork. Zero radio calls. The phone tells them where to go, in what order, and updates the customer for them.”*

## 🖥️ 3. Admin Web Portal Browser · No install

*Positioning: A single dashboard replacing spreadsheets, WhatsApp groups and third-party POS bolt-ons.*

### 📊 Live Dashboard

Today's orders, revenue, deliveries in progress — at a glance.

### 📖 Master Menu

Single source of truth for every dish, cuisine, category, base price. Weekly menus pull from here with per-week overrides.

### 🗓️ Weekly Menu Builder

Schedule Sunday drops, publish/unpublish, toggle À la carte vs Package combo, set "Pick X for $Y" bundle logic.

### 🎉 Catering Configurator (v2)

Per-person tiers, mandatory item groups, optional upgrades, guest minimums, custom upcharges — no code required.

### 📦 Order Management

Filter by status, payment, slot, customer. One-click assign to a delivery partner.

### 🚴 Delivery Partner Mgmt

Onboard drivers (email + password), assign vehicles, track active journeys.

**Upcoming — Wave 2 (in progress)**

- Customer Management (users, order history, credits, blocks)
- Promotions / Coupons builder (à la carte + catering)
- Reviews Moderation
- Reports & CSV export (sales, top items, driver performance)
- Broadcast notifications (email + push)

> *"Every business-critical action — menu, orders, drivers, promos — is 1–2 clicks away in a web browser. No app to install, no console to SSH into."*

## 💰 The Business Case

| | Before Curry & Co. | With Curry & Co. |
|---|---|---|
| **Customer ordering** | Instagram DMs + spreadsheets | Native app, live tracking |
| **Weekly menu switch** | Manual poster + WhatsApp | 1 click, propagates everywhere |
| **Driver dispatch** | Phone calls + printed lists | Auto-optimized routes, live ETA |
| **Payment reconciliation** | Manual e-transfer chasing | Stripe + COD + auto-fail handling |
| **Catering quotes** | Emails back and forth | Self-serve customizer, per-person pricing |
| **Data & reports** | ❌ | Live dashboard + CSV exports (soon) |

**Built on a modern, scalable stack:**
**Frontend** — React Native / Expo Router (iOS + Android + Web from one codebase) · **Backend** — FastAPI + MongoDB (cloud-native, horizontally scalable) · **Integrations** — Google Maps (routing + geocoding), Stripe,

> Google OAuth, Emergent Push Notifications · **Deployment** — one-click publish → App Store + Play Store + Web

## 🎯 The Ask

Curry & Co. is **production-ready today** for the GTA.

Ready to onboard your first **10 restaurants** and **25 delivery partners** in under **30 days**.

**Contact:** admin@curryandco.local · Live demo available on request.
